SUMMARY

A Dedicated Informatics (Computer Science) graduate with a 3.78/4.00 GPA. Specializing in Data Science and Machine Learning with proven experience in developing Explainable AI models and data-driven analytical tools. Demonstrated leadership as Vice President of the Data Science Club, managing internal and technical operations of the community.

EDUCATION

University of Muhammadiyah Malang, Malang, Indonesia — Sept 2021 - Feb 2026

Bachelor of Informatics
GPA 3.78 out of 4.00
Key Coursework: Data Science, Machine Learning, Database Management, Backend Development

MAN 2 Kudus, Indonesia — July 2018 - July 2021

High School Diploma in Mathematics and Natural Sciences

WORK EXPERIENCE

CV Han Media Tekindo, Malang, Indonesia — Sept 2026 - Present

IT Developer

- Internal System Development: Develop and maintain internal software solutions to support business operations, improve workflow efficiency, and centralize organizational data.
- IT System Analysis & Development: Analyze business requirements, identify opportunities for process improvement, and translate operational needs into practical technology solutions.
- System Maintenance & Troubleshooting: Perform system maintenance, debugging, troubleshooting, and technical improvements to ensure the reliability and usability of internal applications.
- Technical Documentation: Create and maintain technical documentation, system workflows, and implementation references to support system development and future maintenance.

CV Han Media Tekindo, Malang, Indonesia — June 2026 - Sept 2026

System Information Intern

- Database Migration & ETL Testing: Led and validated the migration of hundreds of legacy inventory and customer records into a structured relational database (Google Sheets), conducting rigorous Data QA testing to ensure 100% data integrity with zero duplications.
- Functional & UI/UX Testing (AppSheet): Designed a Mini ERP application architecture for operations management and performed comprehensive functional testing on CRUD features, cascading dropdowns, and search optimization to ensure a seamless, lag-free user experience.
- Logic Verification & Load Testing (Apps Script): Developed and executed stress tests on Google Apps Script for an automated PDF payroll system, implementing robust error handling (try-catch blocks) to guarantee script resilience against internet connection dropouts.
- System Integration & Data Pipeline Validation: Built and tested the reliability of real-time data pipelines integrating Google Forms, the main database, and an HTML/JavaScript (Fetch API) monitoring dashboard to successfully prevent any data collisions.

Dinas Sosial Kota Batu, East Java, Batu, Indonesia Aug 2024 - Sept 2024

Data Entry Intern

- Spearheaded the digital transformation of physical archives by categorizing and migrating document data from 2017 to 2018 into centralized spreadsheets, improving data accessibility.
- Performed rigorous data validation by cross-checking physical files against digital databases and managing the sorting and data entry for 2016 inactive archives.
- Classified verification data from the *Sistem Informasi Kesejahteraan Sosial-Next Generation* (SIKS-NG) application.
- Aggregated distribution records for the 2024 staple food assistance program and inputted departmental planning data to support internal operations.

PROJECTS

Operational Management System September 2026

Full-Stack Developer

- Designed and built an end-to-end operational management platform to streamline internal task workflows and operational resource tracking.
- Architected scalable backend services with relational database models to prevent data bottlenecks and maintain high system availability.
- Implemented structured API endpoints and modular application logic for real-time monitoring of operational activities.

Human Resource Information System (HRIS) & Attendance Integration September 2026

Full-Stack Developer

- Engineered a full-stack internal HRIS handling employee administration, dynamic attendance records, and role-based access control (RBAC).
- Integrated physical Hikvision biometric devices via ISAPI endpoints to automate real-time synchronization of employee attendance logs.
- Developed ~80% of frontend interfaces (dashboards, employee tracking, and admin controls) connected seamlessly to custom backend REST APIs.
- Implemented secure database schemas ensuring transactional integrity across user profiles, logs, and system access levels.

Transaction & Inventory Management App (Mini ERP) June 2026

System Analyst

- Designed a relational database architecture from 123 columns of raw flat-file data into structured Parent-Child tables.
- Developed an AppSheet application with a 7-tab UI/UX for Admins to perform CRUD (Create, Read, Update, Delete) operations.
- Conducted functional testing on Auto-Increment IDs, dynamic cascading dropdowns, and search optimization to ensure the app runs smoothly without lag during heavy data loads.

Database Migration & Data Quality Assurance June 2026

Data QA Lead & System Analyst

- Managed and supervised the entire data migration process of legacy inventory and customer data into a newly structured relational database.
- Directed an intern (Data Entry) to clean raw data, while serving as the primary Quality Control (QC) checker to ensure 100% data integrity.
- Conducted rigorous Data Quality checks to identify anomalies, eliminate duplicated entries, and verify correct data types before integrating the dataset into the main ERP system.

Mini HR Data Pipeline & Realtime Operations Dashboard June 2026

System Integrator & QA Tester

- Developed a secure data entry pipeline for Company's field crews using Google Forms, synced to a centralized database using IMPORTRANGE.
- Created a responsive web dashboard using HTML/JS to monitor project status (Booking/Running/Done) with dynamic UI color badges.

- Tested API endpoints using JS Fetch API to ensure real-time data accuracy. Audited and tested Google Apps Script triggers (On Form Submit) with strict conditional logic to prevent data collisions between crew data and customer data.

Mental Health Classification (Explainable AI) September 2025

Data Analyst

- Developed a classification system for mental health disorders using Machine Learning.
- Implemented Explainable AI (XAI) methods to ensure model transparency and interpretability.

Student Achievement Database Website December 2023

Backend Developer

- Built a web-based application featuring full CRUD (Create, Read, Update, Delete) functionality.
- Managed data architecture and storage using MySQL as the primary database system.

ORGANIZATIONAL EXPERIENCE

Data Science Club (DSC), UMM Oct 2024 - Sept 2025

Vice President

- Lead internal community management and oversaw organizational stability.
- Coordinated technical workshops and member engagement initiatives.

Informatics Student Association (HMIF), UMM Sept 2023 - Sept 2024

Academic Department Member

- Contributed to the planning and execution of academic-focused events and competitions.

Informatics Student Association (HMIF), UMM Sept 2022 - Sept 2023

Head of Human Resources Development Department (HRD)

- Responsible for member stability and the successful execution of all department programs.
- Managed conflict resolution and internal team building for the association.

Informatics Student Association (HMIF), UMM May 2022 - July 2022

Staff of Interest and Talent Department

- Contributed to the planning and execution of the department-focused events and competitions.

SKILLS AND LANGUAGES

- Languages: Indonesian (Native), English (C1/Professional), French (Basic).
- Programming: Python, Java, JavaScript, C, HTML, CSS, Typescript.
- Database: PostgreSQL, MySQL, Google Sheets.
- Framework & Libraries: React, Laravel, Node.js.
- Tools: Git, GitHub, Postman, VSCode.
